

## Expand your GSM Customer base

- **Attract traditional fixed line customers.** The GSM DeskPhone appeals to customers who traditionally prefer a traditional phone for home use.
- **Attract seniors.** The GSM DeskPhone's large keypad, QWERTY keypad and easy-to-see display is designed with seniors in mind.
- **Attract first-time users.** First-time users will feel more at ease text messaging with a traditional QWERTY keypad than a numeric keypad.
- **Attract cost-conscious users.** Many GSM tariffs are now below fixed-line rates. The GSM DeskPhone allows home and business users to avail of these low rates with the comfort of a traditional phone.

## Better utilize your GSM network

- **Better utilize countryside capacity.** When an operator employs the GSM DeskPhone as a fixed-line substitute there is little strain placed on the network as countryside capacity is rarely fully utilized.
- **Better utilize capacity during working hours.** Traditional fixed-line usage occurs during office hours, precisely when cellular capacity is low. This means that the GSM DeskPhone compliments a cellular network well.

## GDP-02 Detailed Specifications:

Dimensions:	240x210x100mm
Display:	Illuminated graphical LCD.
Resolution:	135x65 dots, 82x40mm

# The GSM DeskPhone

## Expand Your Customer Base

**GDP-02**

*Enjoy the comfort and simplicity of an ordinary phone with the freedom and functionality of GSM at the same time!*

*As featured on: CNN, PC World, ABC News, The Mature Market....*

## Convenience of a Traditional Phone...

The phone has both audible and visible indicators to clearly show when the phone is ringing. It is equipped with a large numeric keypad for easy dialing and easy number typing, a speakerphone for hands-free communication, a standard corded receiver, automatic redial, mute, programmable speed dialing keys, and one-touch volume control. The GDP-02 also comes with a built-in internal backup battery for safety in the advent of a power outage and its rechargeable so users can also operate the phone on battery power for up to 30 minutes.

The GSM DeskPhone is has been designed to look and operate just like a traditional phone: pick up the receiver and dial a number to make a call, hang up the receiver to end a call. With GSM DeskPhone, consumers can enjoy the comfort of a traditional phone while enjoying the advantages of a GSM phone, such as text messaging and phonebook features.

## ...with the benefits of GSM

The DeskPhone operates over a normal GSM network and supports 900/1800 MHz dual band GSM frequencies. It comes with traditional cellular features such as Full sms text messaging capability, a phonebook that can hold up to 200 contact names and numbers, and call-waiting and conference-call capabilities. Users can also quickly insert their mobile phone's SIM card to import or export an existing mobile phone's address book. The DeskPhone also provides PIN security for controlled access and multiple language support.

## The User-Friendly GSM DeskPhone

- **Comfortable calls over GSM.** Make phone calls over a 900/1800 MHz GSM network using standard SIM cards.
- **Text message with a full keypad.** Write text messages quickly on the complete QWERTY alphabetical keyboard.
- **Large display.** Read text messages easily on the large illuminated LCD display.
- **Convenient keys.** Dial numbers comfortably with the desktop phone's large buttons and speed-dial keys.
- **Hands Free Calls.** Make hands-free phone calls via the phone's built-in speakerphone and microphone.
- **Rechargeable battery for mobility.** Change phone locations conveniently because the GDP-02 has a built-in rechargeable battery.
